

PIONEER INGENUITY is reflected in this peculiar piece of machinery. It was invented and marketed for a time by John Devey of Lehi. What is it? It's a combined sugar beet digger, topper and loader. (Photo courtesy of Mr. Devey's granddaughter, Clara Anderson of Provo)

THE TRACTOR HAS its advantages, but in the earlier days (and still today in many instances) good teams of horses were trusted allies of the farmer in his task of producing food for the family and the market. This picture, taken in southern Utah County in fairly recent times, is typical of scenes known on Utah farms going back decades. Horses provided the power to operate plows, mowing machines, grain binders, cultivators, hayracks, derricks, levelers, etc. You name it...they pulled it.

PITTSBURGH- DES MOINES STEEL CO.

Des Moines Steel Co. designs and builds a
y of structures including: bridges, industrial
chools, churches, warehouses, and water
Water Storage: A wide variety of elevated
g in capacity from 10,000 gal. to 3,000,000
e construction: Blast furnaces, penstocks,
ers, etc. Petroleum and petrochemical
eres, press
